# **Mobifox IBC**

The Mobifox IBC solution provides a measuring - and tracking system for remote stock management and GPS position tracking of diesel tanks.

Several advantages become available: Manual stock control is not necessary anymore. As a supplier, you become independent from others and control your own stock.

The chance that a tank runs empty is reduced to a minimum. The GPS-position of a tank is stated on a map. This will reduce time for finding tanks and the number of disappeared tanks will be reduced.

The Mobifox IBC solution will make your delivery more efficient and secure. Your customers will love it!

#### Controller unit

Our unique PCB is housed in an industrial enclosure. The PCB including firmware is designed by Mobifox. It supports a lot of interfaces and protocols and makes it possible to develop custom made solutions on low cost and short time frame.

### Float - or pressure sensor

Mobifox distinguish itself by using a stainless steel float sensor. This is a ruggedized sensor very well suitable for IBC's. If float sensor cannot fit, we will use pressure sensors.

#### **Mobifox Cloud**

All measured data is send wirelessly to the central cloud server. Mobifox uses 2G or 3G modems for a secure and reliable communication.

The Cloud application puts the row data into user friendly graphs and tables.

Alerts messages are easy to configure. A notification can be send when reaching a minimum level, a low battery, and inspection service.

#### Interface to 3rd party applications

Mobifox Cloud can offer API's for easy integration to other systems.

#### **Specifications**

Specs Mobifox PCB:		
Power	Internal power	612V
	External power	630V
Telit GSM-GPRS modem		Dual-band 900/1800 MHz
		GPRS class 10
Telit GPS module		Assisted GPS
		48-Channels
		-163dBm
Embedded sensors		Humidity
		Accellarometer
		Temperture
Interfaces		4 x in 0-1000Ω
		5 x I/O analog/digital
		RS232
		RS484
		SPI
		I2C
LED		2-color
Press button		Activation, Soft-reset, Hard-reset
Polarity and over voltage protection		Internal power: max 16V at 200ms loaddump
		External power: max 40V at 200ms loaddump
Power usage	Active avarage	70mA
	Active GPRS session	150mA
	Active GPRS en GPS	200mA
	Low power mode	μΑ20
Industrial enclosure	IP range	IP67
	Temperature	−20°C +100°C
	Material	Polycarbonate
	Dimention	130x150x40
